The contents of this manual and the specifications of the instrument covered by this manual are subject to change for improvement without notice.

1. Introduction

This manual describes how the AD-1688 works and how to get the most out of it in terms of performance. Please read this manual completely before using the AD-1688.

2. Unpacking

When unpacking, confirm that everything is contained.
- AD-1688 Weighing Data Logger
- USB extension cable (0.5 m)
- RS-232C cable with a D-Sub 9-pin connector (1 m) : AX-K03571-100
- RS-232C cable with a D-Sub 25-pin connector (1 m) : AX-K03572-100
- RS-232C cable with a 7-pin DIN connector (1 m) : AX-K03573-100
- Instruction manual (this document)

</tr>
<tr>
<td>CLEAR (CANCEL)</td>
<td>None</td>
<td>Enters the data deletion mode.</td>
</tr>
</tbody>
</table>

3. Features

- When connected to the RS-232C interface of a weighing instrument, the AD-1688 can store the data that the weighing instrument outputs. Thus, storing weighing data is possible in an environment where a personal computer cannot be used.
- The AD-1688 has an internal clock. This allows the date and time to be stored, along with the weighing data.
- The maximum data to be stored is approximately 5000, using the A&D standard format (15 characters in 1 data set).
- The stored data can be read to a personal computer using USB. As the AD-1688 is recognized as USB memory, special software is not required to read the data.
- The data is stored in CSV format and can be used easily by software such as EXCEL.

4. Key Operations

5. Setting the Date/Time

Note: The date and time were set to the Japanese standard time at the factory when shipped. Before use, set the date and time to your local time.

Change the date and time as follows.
For easier setting, the AD-1688 Setting Tools is available for downloading from our website.

1. Connect the AD-1688 to a weighing instrument using the RS-232C cable.
2. Refer to “8.2. Date/Time Display” to display the date and time.
   - When the year, date or time is displayed, press and hold the SET key for 2 seconds or more. The display flashes and the AD-1688 enters the setting mode.

Using the following keys to set the date and time.
- DISPLAY (+) key: Increase the value by one
- CLEAR (CANCEL) key: Decrease the value by one

When the above keys are held pressed, the value is increased or decreased continuously.

1. After setting the year, month, day, hour and minute, press the SET key to return to the data number display.

6. Storing the Weighing Data

6.1. Basic Operation

1. Connect the AD-1688 to a weighing instrument using the RS-232C cable.

Note: When the weighing instrument and a personal computer are connected simultaneously, communication with the computer has priority. Data storage will not be performed.

Use the cable appropriate to the RS-232C connector of the weighing instrument.
When the cable is connected, power is supplied to the AD-1688 and the weighing data number appears.

2. Press the PRINT key of the weighing instrument to transmit the data to the AD-1688.
   - When the data is stored in the AD-1688, a buzzer sounds and the data number increases.
   - Repeat step 2 as necessary.

4. When the number of data necessary is stored, disconnect the AD-1688 from the weighing instrument.
   - The display of the AD-1688 turns off.

Note: During the data storage operation, do not remove the RS-232C cable.

5. Connect the AD-1688 to the USB port of a personal computer.
   - Use the USB extension cable as necessary.
   - When connected for the first time, a driver is installed automatically.
   - The AD-1688 is recognized as a removable disk.
   - No special software is required.

6. Open the removable disk using Windows explorer.
   - The AD-1688 is recognized as a removable disk.
   - No special software is required.

An example of the data opened using EXCEL is shown below.

Note: ###### may appear in column B.
To display the date, broaden the column width.

7. After copied, delete the “AD-1688.csv” file from the AD-1688 if necessary. Deleting unnecessary data individually is also possible.

7. Deleting the Weighing Data

Note: The AD-1688 performs as follows only when connected to a weighing instrument.

Two ways of deleting data are available; deleting the most recent data (or data with the most recent number) or all the data. Use this to delete the incorrect data.

1. Data number display
   Connect the AD-1688 to a weighing instrument using the RS-232C cable.
   When the data number appears, press and hold the CLEAR key for 2 seconds or more.

2. Selecting a deletion mode.
   The "CLR" segment turns on and the most recent data number flashes.
   Under the above condition: Release the CLEAR key to enter the mode to delete the most recent data.
   Keep pressing the CLEAR key to display "ALL". Release the CLEAR key here to enter the mode to delete all the data.
   If the CLEAR key is kept pressed, the display indicates the most recent data number and "ALL" alternately.
   Mode to delete the most recent data
   Mode to delete all the data
   Release CLEAR

3. Deleting the data
   Press the SET key to delete the designated data. The display indicates the reduced data number.
   If the SET key is not pressed within 5 seconds, the AD-1688 returns to the data number display without deleting the data.

8. Switching the Displays

8.1. Memory Utilization Rate
When the data number is displayed, press the DISPLAY key to display the memory utilization rate.
Press the DISPLAY key again to display the data number.

Data number display

Memory utilization rate

8.2. Date/Time Display
When the data number is displayed, press the SET key to display the year, date, and time.

1. Data number display

2. The display indicates the year and date for 2 seconds each, and then indicates the time.

3. Press any key to return to the data number display.

---

9. Function Settings

In the function setting mode, settings of the AD-1688 performance and communication can be changed.
Each function has parameters. By changing the parameter, specify the performance of the function.
The set parameters are maintained in memory even if the AD-1688 is disconnected from the weighing instrument or personal computer.
For easier setting, the AD-1688 Setting Tools is available for downloading from our website.

9.1. Setting Procedure

1. Connect the AD-1688 to a weighing instrument using the RS-232C cable.
2. Select an option and press the SET key:  Confirm the setting and go to the next function.

9.2. Function List

<table>
<thead>

10. Interval Mode

- In the interval mode, the weighing data is stored at a certain interval.
- Available intervals are: 1, 2, 5, 10, 15, 20, 30 seconds / 1, 2, 5, 10, 15, 30 minutes / 1 hour

1. Connect the AD-1688 to a weighing instrument using the RS-232C cable.
2. Select the interval mode (Interval) for the data storage mode (rEC) of the function setting and set the interval time (120 seconds in the example).
Press the CLEAR key to display the data number.
In the interval mode, the mark turns on at the lower right.
3. Set the data output mode of the weighing instrument to the stream mode. For details on the setting procedure, refer to the instruction manual of the weighing instrument.
4. Press and hold the DISPLAY key for 2 seconds or more. The AD-1688 starts to store the data at a set interval. The mark flashes while the data is being stored.
5. To stop storing the data, press and hold the DISPLAY key.
The mark stops flashing and turns on.
6. Remove the AD-1688 from the weighing instrument.
7. Connect the AD-1688 to a personal computer and read the stored data.

11. Error Display

<table>
<thead>
<tr>

<td>The baud rate and parity of the received</td>
<td>Ask for repair.</td>
</tr>
</tbody>
</table>

12. Specifications

Devices to be connected
- Scales and balances with an RS-232C connector manufactured by A&D (Visit our website to determine which devices are applicable.)

Number of data to be stored
- Approximately 5000 data in the standard format (15 characters in 1 data set).

Clock error
- ±1 minute / month

Applicable OS
- Windows 2000 / XP / Vista

Dedicated power supply
- Not required

Power is supplied from a weighing instrument or a personal computer.

Operating temperature
- 5°C to 40°C

Operating humidity
- 85%RH or less, no condensation

Dimensions
- 55x103x16.5 mm

Mass
- Approximately 60 g
